

Fishing Tips

For Walls with Insulation

Use “Band-It” strapping that the bundle building materials with. Choose some that $\frac{3}{4}$ ” to 1” wide. You’ll need tin snips to cut it. Bend, Flatten, and tape an Eye in it. You can control the Trajectory of it and keep it on the side with the moisture barrier on it. Much better than a $\frac{1}{8}$ ” Fish Tape.

For Fishing Under Carpet

Again, Use “Band-It” steel strapping the Wider the Better. You can really control the Direction your tape is going. Picked up this trick at the Las Vegas Convention Center and it Works Great.

To Catch another Fish Tape

Put a Loop of Pulling String about a Foot Long (start with two feet of string) on the end of one Fish Tape and Open the Eye on the other One. Let the Tapes Pass each other in the Conduit then Twist the one with the Open Eye and draw it Back to Catch the Loop.
