

# ConeHead Flex Pulling Tool

## Instructions for Use

Select proper size ConeHead Tool for appropriate size flexible conduit. Please note that this tool will work with most flexible metal conduits on the market however there are some that the tool will not stay snug in. Make sur tool has a firm grip in conduit before attempting use.

Screw Tool into conduit until edge of conduit just touched the Lip on the tool. Do not overtighten Tool into conduit, a snug fit is all that is needed .If Tool is overtightened you may have to unscrew Tool with a pair of pliers.

Attach Leader. A solid piece of wire works well or you could use a piece of Tie Wire, a length of string tied to the end of the tool also works well or just attach a fish tape directly to the end of the Tool.

Pull Conduit in Wall or Across Ceiling.

Once Tool is pulled in, detach fish tape or string and simply unscrew Tool from conduit. It is sometimes necessary to compress the conduit against the Lip of the Tool to and then unscrew the Tool.
